

RETAINING WALLS

The free standing precast concrete wall

RETAINING WALLS

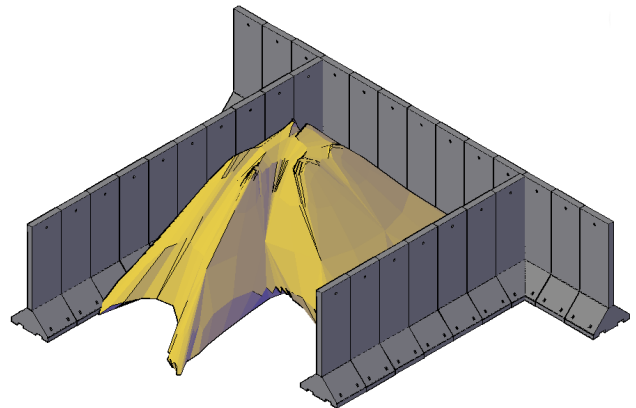

Retaining Walls are a recognised system used for the construction of permanent or temporary walls. With the ability to be removed and rebuilt in other locations makes them the ideal structure. The heavy base section provides ballast meaning all units are completely free standing. The free standing dry bonded system offers quick installation with an optional fixing down system for increased loading.

Height (mm)	Width (mm)	Length (mm)	Weight (kgs)
2500	1500	1200	3200
3000	1500	1200	3500
3500	1500	1200	3800
4000	1500	1200	4100

The SPS retaining wall is manufactured to BS EN Standards from high strength concrete, with forklift slots for safe and easy handling.

Great Yarmouth and Dundee branches stock standard size units allowing for a fast turnaround from order to delivery.
